Web Programming

Abstract/Introduction

Event Planner is a web application that will allow its users to search and view the events/tours held in past, present and future. User will also be able to see the ratings mentioned by other users (who attended the event). User can also subscribe for Emails to get updates for upcoming events. The user would be able to search using the following filters:

- Location (by province or city)
- Per person charges
- Date
- Number of days

The user can also request for custom events using a Contact Us form. The admin can only add new events,

Functional Requirements:

Interface Requirements:

Admin Module:

- Add an Admin/ Login: The main administrator can add any other person as admin.
