

Web Portal for Vehicle Servicing at Home

Project Domain / Category

Web Programming.

Abstract / Introduction

This is web-based project which is going to be for an automotive workshop that is intending to deliver doorstep service. The workshop must be able to display their services and cost on the website. Users must be able to register and login to cart the required services. Users must then be able to confirm the service time slot and complete the checkout process.

Functional Requirements:

Following are the functional requirements for the project:

1. User registration module, which can gather user basic, contact and address information for the project;
2. User management section on admin side(add/update/delete);
3. Workshop management feature (add/update delete workshop information);
4. Category management for services;
5. Service management (add/update/delete or change category of service for workshop);
6. Browse and search for services on user end for required service;
7. Place order for particular service by selecting the time slot and payment method (cash on delivery, bank transfer, easy paisa, jazz cash).

Tools:

You are free to use any tool provided that all the functional requirements are met properly.
